Dr. Victoria Harden: This is an interview with Ron Winterrowd about the history of the NIH logo on March 21 <sup>st</sup> 2005. The interviewer is Victoria Harden. Mr. Winterrowd, thank you so much for talking with us today. What I'm interested in is the development of the NIH logo and I understand that you came to NIH in 1960. Would you tell me what kind of logos were in use in the '60s before we got a dedicated NIH logo.
Ron Winterrowd: Well as far as I can remember there were none, because of the restrictions that H.E.W. and the Public Health Service placed on us. We really didn't have an identity and I'm not sure that we even considered having an identity. This first logo happened, or was conceived by, Charlie Shinn who had been hired as the chief of Medical Arts and Photography. He
VH: Let me interrupt you one second. Charlie Shinn, that's Charles S can you spell his last name for me?
RW: S-H-I-N-N.
VH: Thank you, go ahead now.
RW: He was art director at HUD and when Dr. Ferguson was relieved of duty he was hired and his claim to fame was that he cleaned up the old Public Health Service logo, modernized it and so forth. Actually he really should have left it alone.
VH: This was the failed anchor logo, right?
RW: Yes, right.
VH: And he modified it and brought it up to date?
RW: Yes.
VH: Oh that's very interesting. I didn't know that.
RW: You haven't seen that?
VH: I probably have
RW: You probably have.

VH:	No he didn't come in until the '80s, so this was still Fredrickson.
to sh don't	Still Fredrickson? Fredrickson looked at it and said, "You know that's a lot better." This is heresy from Hugely. It's a lot better, but what can we do now our relationship, our important relationship, to other organizations, other health organizations, like our grantees, like the cancer hospitals, like I tknow pharmaceutical houses? And so said there's an important link that we play in this effort. So by taking out a little bit of each triangle we made a and also we made a flask, or glassware that's used in the labs and so forth.
VH:	And it's open-ended so it goes out.
RW:	Right. So basically that was it.
VH:	And why was it decided, do you know, to put the words around the outside instead of NIH on the inside?
RW:	Right.
VH:	Does it matter? I mean was there a reason or?
RW:	No it just
VH:	Looked better?
trian	Looked better and it also confined the image and it also worked well with H.E.W.'s and DHHS, which were circular. This also, because of the double gle, allowed us to do it in color, especially for the centennial, bicentennial, where the lettering was done in a medium gray which gave a silver look, the ide triangle was in a blue and the inside triangle was a red. So it gave a very patriotic look.
	And you're speaking of the 1976 Bicentennial, of the Declaration of Independence, but there's another anniversary that I want you to talk about too that's the NIH Centennial and there a special logo was designed for that. Can you tell me about that logo?
savir	There was a contest for the employees of NIH. The MAPB people were excluded, could not participate and so the prize was a \$100 war bond or ngs bond and Hugely said, Okay we'll put it out and see what comes out and then we'll bring it back to you and we'll clean it up. So they awarded the to this one logo. I guess there wasn't many to choose from
VH:	But it shows the number 100 and a microscope inside.
RW:	Right. And he brought it to us to clean up and fix and whatever, and the person that found out about it raised holy heck.
VH:	Didn't want you to change it.
RW:	Right. So they you know basically we just cleaned up the type and
VH:	Left it like it was.
RW:	Left it like it was.

VH: Yes, the golden arches.	
RW: Yeah. It is an organizations identity. It's their face. It's how the public recognizes you and if you keep changing it people wonder what is this? What happened to the old?	
VH: It also struck me that people like to give logos nicknames. NASA has had two different ones and the one I remember they called it the meatball, because it was round and the one that we currently use well as I said Storm Molley called the first NIH logo the sprung triangle and then he called this one has been called the coat hanger and the wool mark, because it looks similar to the Wool Associations trademark.	
RW: But if you put them side-by-side they're	
VH: Oh they're very different.	
RW: Yeah.	
VH: But I mean I think people just generalize when they're giving them nicknames to know and just to kind of round this out if you have seen the T.V. series Medical Investigations which features the NIH doing actually what the CDC does, it's a very bizarre sort of thing, but they've taken this logo and it's like they've bent one of these arms down so that it's clearly not the NIH logo as it is and yet it's the same thing. They've twisted it in order to keep it. So somebody recognizes this and	
RW: Well as I said I saw it recently on the website, thought it looked very good. I saw it on the Natcher building and it looks good in signage and it looks good on publications and I think people identify with it.	
VH: It's simple, but it conveys. That's what you really want.	
RW: Yeah and it's versatile but	
VH: And here we are. Is there anything else you want to add before I turn this off?	
RW: I can't —	
VH: And I did forget to do one thing at the beginning of this tape and that is	
RW: Turn it on. [laugh]	
VH: No to tell you that we were taping, recording and get your assent on tape if that's okay with you.	
RW: Yes.	
VH: It's okay. Good. Well thank you very much I appreciate you doing this and this will help document something that people see all the time, but rarely think about.	
RW: Well did you know about the anything about that?
